

World's Airports And Leading Airlines Join CommonTrust Network And Begin Roll-out Of CommonPass In December In Support Of Safer Border Reopening

November 24, 2020

- The World Economic Forum and The Commons Project Foundation welcome Airports Council International (ACI) World as a member of the CommonTrust Network
- CommonTrust Network airlines JetBlue, Lufthansa, Swiss International Airlines, United Airlines, Virgin Atlantic to begin roll-out of CommonPass to passengers in December from New York, Boston, London, and Hong Kong
- CommonPass lets individuals demonstrate their COVID status while protecting their data privacy
- The CommonTrust Network is a global non-profit initiative to empower individuals with digital access to health information, including lab results and vaccination records
- The CommonTrust Network includes hundreds of health systems covering thousands of locations in the United States and a growing network of labs and health care providers around the world
- CommonTrust Network airport labs include XpresCheck (JFK, EWR, BOS), Collinson (LHR, LGW) and Prenetics (HKG)

GENEVA, Nov. 24, 2020 /PRNewswire/ -- The World Economic Forum and The Commons Project Foundation today welcomed the Airport Council International (ACI) World, representing nearly 2,000 airports globally, and five leading global airlines as members of the CommonTrust Network.

"The members of the CommonTrust Network are coming together to implement an inclusive global network designed to empower individuals with digital access to their health information so they can protect and improve their health, and demonstrate their health status to safely return to travel, work, school, and life, while protecting their data privacy," said Paul Meyer, CEO of The Commons Project Foundation. "We welcome collaboration with public and private stakeholders across many sectors, including ACI World and IATA in aviation."

"As the world works to overcome the pandemic, all countries face the challenge of how to reopen borders for travel and commerce while protecting their populations' health," ACI World Director General Luis Felipe de Oliveira said. "Key to this will be a globally-harmonized approach underpinned by cooperation and consistency between all players in the aviation industry."

"The CommonTrust Network and CommonPass will help to foster this consistent approach, especially as it will include more than just the aviation industry," said de Oliveira.

CommonPass was first successfully trialed in October on Cathay Pacific Airways and United Airlines flights between Hong Kong, Singapore, London, and New York. Government observers of the trials included the United States Customs and Border Protection (CBP) and Centers for Disease Control & Prevention (CDC), and the United Kingdom Border Force and Ministry for Transport.

CommonTrust Network airlines JetBlue, Lufthansa, Swiss International Airlines, United Airlines, and Virgin Atlantic will begin the roll-out of CommonPass in December on select flights departing from New York, Boston, London, and Hong Kong.

CommonTrust Network airport labs include XpresCheck (JFK, EWR, BOS), Collinson (LHR, LGW), and Prenetics (HKG).

This support from the world's airports for the CommonTrust Network and CommonPass comes a week after the three airline alliances - oneworld, SkyTeam, and Star Alliance - called for a globally harmonized approach for validation and authentication of testing and vaccination, highlighting CommonPass.

"The recent digital 'health pass' trials, such as CommonPass, are presenting a strong case for using digital technology to deliver harmonized standards in the validation and verification of accredited passenger health data," said the statement from airline alliances, whose 58 member airlines represent over 60% of world airline capacity.

"Together with our partners, we support all efforts to make traveling under Coronavirus conditions safer and easier in the future. We are pleased that Lufthansa Group airlines can be pioneers on selected routes in the USA and Europe by offering the use of CommonPass to our passengers," said Christina Foerster, Lufthansa Group Executive Board Member Customer, IT and Corporate Responsibility.

"Through our 'Safety from the Ground Up' program, JetBlue has been a leader in providing a layered approach to safety on the ground and in the air, including being the first U.S. airline to require facial coverings," said Joanna Geraghty, president, and chief operating officer, JetBlue. "We are excited to be one of the first airlines in the world to partner with CommonPass to provide another layer of safety to air travel in the United States and around the world. Reliable testing, combined with digital health passes, is another way to restore customer confidence and safely restore air travel."

"United has consistently demonstrated its leadership in developing innovative solutions to help ensure a safer travel experience for our customers during these challenging times, which now includes being one of the first airlines to join the CommonTrust Network," said Steve Morrissey, United's vice president, regulatory and policy. "We were proud to be the first U.S. carrier to trial CommonPass on October 21st from London Heathrow to Newark. Testing is a key component of our multi-layered approach to safely reopening travel and ensuring our customers' wellbeing, and we look forward to using technology platforms like CommonPass to provide travelers and governments confidence in verified COVID-19 testing results."

"Our partnership with CommonPass adds to the multi-layered health and safety measures that Virgin Atlantic has in place to ensure that our customers fly safe and well. Ahead of a vaccine, ensuring customers understand the latest testing requirements to travel is vital to building consumer confidence and the CommonPass solution is an important step towards offering a common international standard," said Corneel Koster, Chief

Customer and Operating Officer, Virgin Atlantic. "We expect governments to move with urgency towards aligned testing standards and in parallel, to implement a robust pre-departure testing regime that supports international travel, safely replaces quarantine as soon as possible and enables the skies to reopen at scale."

"As the Forum, we are committed to bringing our health, supply chain, aviation, and maritime sectors together to ensure the success of this global common utility," said Christoph Wolff, Head of Mobility at the World Economic Forum. "The CommonTrust Network is the kind of concrete, swift, cross-sector collaboration needed to enable a unified action to restore confidence in travel. Siloed efforts will only create more confusion and hinder the industry's recovery."

The CommonTrust Network is enabled by a global network of labs, vaccine distributors, and health care providers that agree to provide individuals with digital access to their own health information using open, globally-interoperable standards (e.g. HL7 FHIR, W3C verifiable credentials). The network includes hundreds of health systems covering thousands of locations in the United States and a growing network of labs and health care providers around the world.

"Airport COVID testing and a safe, consistent approach to digital information management are key unlock to restoring passenger confidence in air travel. XpresCheck is very pleased to be a lab and testing partner in the CommonTrust Network," XpresCheck's Chief Executive Officer Doug Satzman said. "New York and Boston represent major commercial hubs to the world which can soon be activated through innovative partnerships like this."

"We're proud to be part of this collaboration, and working with CommonTrust Network and other partners to create a solution that will help more people return to work and travel safely during the pandemic and beyond," said Joan Harvey, president of care coordination at Cigna.

The Commons Project Foundation

A non-profit public trust established with support from the Rockefeller Foundation, The Commons Project Foundation builds and operates digital platforms and services for the common good. Our mission-driven structure is designed to attract world-class talent to build and sustain digital public services in a way that serves people's interests above all. Beginning with health information, we are focused on empowering people to access and control their personal data and put it to use for their own benefit.

The World Economic Forum

The World Economic Forum is the International Organization for Public-Private Cooperation. The Forum engages the foremost political, business, cultural and other leaders of society to shape global, regional and industry agendas. It was established in 1971 as a not-for-profit foundation and is headquartered in Geneva, Switzerland. It is independent, impartial and not tied to any special interests. The Forum strives in all its efforts to demonstrate entrepreneurship in the global public interest while upholding the highest standards of governance. Moral and intellectual integrity is at the heart of everything it does.
